HELPFUL REVIEW

1. Literature Review:

What do we currently know about this topic (list 3-5 main points)?

What is the rationale for the H/RQ (list main points from the argument presented)? Is it persuasive (does it make a strong argument for the H/RQ)?

2. Methods:

What is the proposed method (briefly describe)?

How strong is the fit between the method and the RQ/H (variables are clearly present, tested etc.)?

Any potential confounding variables or other systematic biases? Any limitations that could be reasonably overcome in a pilot?
